

Medical Report

Diagnosis: Multiple Cherry Angiomas

Details: The image shows numerous small, red, dome-shaped lesions scattered across the patient's skin.

Accuracy: 95.0%

Recommendations:

- * No treatment is typically necessary for cherry angiomas unless they are causing significant symptoms.
- * If cosmetic concerns exist, discuss treatment options with a dermatologist. These might include laser therapy or electrocautery.
- * If any lesion changes in size, shape, color, or begins to bleed or ulcerate, it should be evaluated by a healthcare professional.
- * Regular skin self-examinations are recommended to monitor for any changes in existing moles or lesions.
- * Consider consulting a dermatologist for a professional evaluation and to discuss any concerns.
